## Pension Fund Accountant Software from Micro-Pension Systems

**PFACCT.INI on Microsoft Windows Vista / 7**

**27/05/2009**

Previously, after installation and registration, the essential .ini file (PFACCT.INI) is stored in the local Windows folder: C:\WINDOWS or possibly C:\WIN32

This file contains the pointer to the location of the shared data, and may need to be edited from time to time. (See the Help File for full information on this.)

However on a Windows Vista / 7 PC, if the software has been installed by a user rather than by the administrator, it is likely that the file will be held in a different location.

So if the file cannot be found in the local Windows folder, then look in the following folder

C:\Users\*username*\AppData\Local\VirtualStore\Windows

Replacing *username* with the actual username of the user.

So if PFACCT.INI is not in the Windows folder then look in this alternate location. And once found it can be edited as required.
